

Technos MP

The multipurpose high performance

With the MP version, Technos family has been recognized as a very high level of ergonomics and technology system always with an accurate high performance-price ratio.

Convex, Linear and Phased Array probes with cardiac capabilities grant any diagnosis approach with sophisticated technologies available like TEI™, ImageLab™, LAN/WAN connectivity, all DICOM® service classes.

Free hand and Flock of Bird® 3D is available in order to give you flexibility of choices and software. And more can be obtained using the unique VPan software, extended field of view to be used in different applications with the same standard probes.

Again, more possibilities with CTEI™ Contrast Tissue Enhancement Imaging which includes C3-Mode™ and Time/Intensity curves analysis to help in contrast management of patients, using High-Low MI and intermittent mode.

In order to fulfill any diagnostic query, complete cardiac hardware and software package is provided for any kind of cardiac examinations also to be performed using the extended range of PA probes and the multiplanar TE.

As a summary, a complete flexible tool in a class of its own.
